

RHINO
HEADHUNTERS

Why Rhinos?

The sound combinations are endless! Reposition rod to height in length. The rod will cut through the brush wires and contribute the exact amount rod sound you want to interact with on your drums or cymbals; giving you a balanced sound between these two contrasting sounds.

How to repositioning the rod to achieve different sound ideas

To move the rod: move O-Rings #2 & #3 to #1, this reduces friction and the rod will now slide in or out.

To adjust height of rod: move all 3 height and positioning forward or backwards
